Santa Ana, California 92704

Dear Dr. Chou:

The recent demonstration in the Los Angeles County Emergency Operations Center (CEOC) showcased GST's ability to integrate twelve different Department units using various data communication protocols and enabled disaster management personnel to visualize the convergence of both vehicles and personnel. The ability to see the real-time tracking of resources from the Emergency Operations Bureau (EOB), and also to have virtual situational awareness from the Mobile Digital Computer (MDC) at the Command Post through the use of air cards was highly beneficial to effective emergency management.

Most impressive was the ability to view the physical location of individual deputies carrying GPS handsets while they were responding to all three locations. Through this demonstration, we were able to have one common operating picture from all levels of the incident command structure. We look forward to the continuing development of this program and its further applicability to law enforcement operations.

I wish you and your staff great success.

Sincerely,

Eric G. Parra, Captain
Emergency Operations Bureau
