RE: GeoSpatial Tracking Technology

I am writing the letter to express my sincere thanks for all of the work done during the last three years by your dedicated staff on behalf of the Anaheim Fire Department and our affiliated partners.

I continue to be impressed with GST's ability to take concepts expressed in informal brain storming session and turn them into fully realized operating systems. This best example of this unique working relationship is the application for tracking of Nextel handsets through GST software. I brought a concept forward to you and the team from Nextel and with a few short months we had a product that allowed fire departments and emergency responders to track assets through their mobile phones. The ability to pre-load the application in our Emergency Response Team phones has been an integral part of our planning and deployment for major sporting events in Anaheim. This software and application has now become an integral part of our operating policy. I am sure the ability to quickly and cost effectively implement a full functioning AVL system will allow this software solution to fulfill the critical ask of tracking resources in a large number of public and private agencies around the country.

Our current joint project list and development programs will take Anaheim Fire, Police, Public Utilities and our Metro Net partners into a new era of on scene assets management and information accessibility. I am looking forward to seeing what the future holds for your company as it grows and expands it's partnership with other industry innovators.

I only hope that when you ask them tough question and place demands like I have on you that their answer comes back as yours always seems to and that is "Yes we can do that, when do you need it by."

Sincerely,

Bob Logue
Division Chief
Anaheim Fire Department
